To whomsoever, it may concern

Dear Sir/Madam,

It was a pleasure to have read your project **Development of hygiene fabrics using sustainable finishes from herbal extracts**

The hygiene fabrics are very useful in the medical field, right from hospital linen to wipes to uniforms and ward furnishings. This herbal constituent replacing chemicals is very challenging and applying the same on fabric exhibiting excellent results of antifungal and antibacterial properties is very innovative.

Interestingly these herbs are already being used in Ayurvedic medicines with good results.

To use the same herb extract and apply it is a very innovative approach, and sustaining it for ten washes is again very commendable. The list of fabrics used for hygiene purposes is very long used for various application, Antibacterial and antifungal property is very important for hygiene fabrics, which has been successfully studied in the project.

This study has been carried out on cotton, but I suppose we could apply to synthetics as well. Further study can be carried out on the same.

On the whole, the project looks exciting, innovative and definitely eco-friendly and hopefully economical too; wishing you all the best in your further endeavour. Antibacterial fabric is a great boon in these days of the pandemic.

Hope to see these products in the market soon.
