

**09.09.2021**

**Hanoi, Vietnam**

**To Whom It May concern**

Subject: Project review of development of advanced textile finishes using nano emulsions from herbal extracts for organic cotton fabric.

Current research project having great potential to meet consumer needs. Since with current pandemic there is a huge demand and awareness for health and protection effects.

Protection effects /technologies based on natural resources is a great advantage of this project. Major brands and consumers are looking for durable finishing effects.

Novel finish targeting to create a durable antimicrobial finish durable up to 20 Home laundries.

I wish a great success to research team to create novel finishing technologies, which are need of the day.

**Thanks**
